

Yi Cui is a Professor in the Department of Materials Science and Engineering at Stanford University. Before coming to Stanford in 2005, Yi was a Miller Postdoctoral Fellow at University of California, Berkeley. He earned a Ph.D in Chemistry at Harvard University and a B.S. in Chemistry at the University of Science and Technology of China (USTC). His expertise is on materials design, synthesis, characterization and device applications for energy, environment and quantum materials. His research spans a breadth of applications, including batteries, solar cells, electrocatalysts, water and air filtration, soil cleanup, thermal textiles and wearables, 2D materials and topological insulators. Prof. Cui has published ~500 research papers and has more than 50 patents. He is a Fellow of Materials Research Society, Electrochemical Society and Royal Society of Chemistry. Yi Cui is a Co-Director of the Bay Area Photovoltaics Consortium and a Co-Director of Battery 500 Consortium. He founded three companies to commercialize technologies from his group: Amprius Inc., 4C Air Inc. and EEnotech.
